

Hi! I'm a passionate Computer Science Master's student at KU, always specializing in Machine Learning and Quantization.

If you're looking for someone who has keen understanding of efficient AI and scalable software design, you're in the right place!

0.1 🔍 What Am I Looking For?

I'm passionate about Open Source and small AI: we should build AI with clear and specific purposes so that

- We can analyze failure point and can boost.
- We can measure how much it automate and boost performance.
- We save energy!

Progress come when the technology spread, scalable doesn't mean that you make it bigger, but that you make it available to everybody. And the smallest and simplest thing is the easiest to scale up.

0.2 🚀 Where Did My Journey Begin?

I earned my Bachelor's in Padua: a vibrant city with over 70,000 students.

But I wanted more: a global perspective and a dynamic tech environment. That's why I moved to Copenhagen to pursue my Master's at the University of Copenhagen, deepening my expertise in AI and innovation.

0.3 💡 My Most Inspiring Experience

I spent a summer with Professor Da San Martino. We researched AI-driven fact-checking and media propaganda detection. My work? Comparing Recurrent Neural Networks, Tree Kernel Methods, and Large Language Models for Sentiment Analysis.

0.4 How Do I Spend My Free Time?

I'm building a startup to boost Open Source collaboration in Europe. I am also into sci-fi and fantasy books like The Foundation or Game Of Thrones. Always with great techno music in the background.
